

The International Network for Acid Prevention

An organization of international mining companies dedicated to a reduction in the liability associated with sulphide mine materials

August 2006

NEWSFLASH

www.inap.com.au

We are pleased to announce that the Swedish Association of Mines, Mineral and Metal Producers (SveMin) has been selected to host the 8th International Conference on Acid Rock Drainage (ICARD) in 2009 in Skellefteå, Sweden.

The two bids presented at the 7th ICARD in St. Louis, Missouri were made by the Water Institute of Southern Africa Mine Water Division and SveMin. Both bids were extremely competitive and the decision was a very difficult one to make.

The International Network for Acid Prevention and its affiliates in the Global Alliance look forward to working closely with SveMin and seeing everything that Sweden has to offer. Please watch our website for updates on the conference as details become available.
